

USE: Apply NT-DRY once per day. Quick and easy, it takes only seconds. It is clean, safe, and natural. NT-DRY is “dusted on” with a thin-tipped squeeze bottle. Apply along the frog, and deep into the heel crevices. Within seconds you will see the powder begin to work. For best results, use the edge of your hoof pick to push the powder into the heel crack - which is where moisture and bacteria hide. NT-DRY absorbs and removes the excess moisture along with the Black Goo associated with soft heels and frogs. It simultaneously soothes with healing herbs. The photos below speak louder than words.

DAY 1 -

DAY 4 -
using
NT-DRY
once per day

Is your horse tender? Check for excess moisture in the heel crack and grooves. If you discover a “heel crack,” there is a problem. Excess moisture becomes Black Goo!

Testimonial

“I saw results with your NT-DRY within just a few days... I have tossed away every other conceivable product for [mushy, tender frogs], that was occupying space in my cabinets.

Thank you for putting this product out there and making it available. It is a pleasure to say that it is one of the few products I have tried in my lifetime that has actually done exactly as promised !!!! Thank you for being there !!!” M. Cannizzo, R.I.

Do Your Horse's heels look like this?

Sulcus Crack + Soft Heel = Tenderness!

NT-DRY First Ever **DRY** Formula!

Testimonial

“I am so pleased with your product. My gelding has battled [soft heels] since I got him over a year ago. He is naturally thrush prone according to my barefoot trimmers. His stall and paddock are kept immaculate, I have changed his feeding program to a low sugar/carb feed. I have tried every product on the market to treat the problem and yours I swear is the ONLY one that has ever worked! In fact after using your product for a few weeks, my trimmer has declared my gelding problem free!!!! I can't tell you what a relief this is. So thanks for your fantastic product, I am spreading the word to everyone!” Christine :-)

NT-DRY Heel and Frog Maintenance

NT-DRY®

The First Ever **DRY** Approach to
Heel and Frog Maintenance

Why put a “wet” product on a “wet” problem?

- * Absorb and remove moisture from soft frogs
- * Just Dust On * Use as a prevention aid
- * Also use on Mud Fever and Rainrot!

NT-DRY

Heel and Frog Maintenance

Treat tender Frogs in 4-7 Days....

How Does It Work?

1. NT-DRY ® absorbs and removes the excess moisture that can lead to thrush and related hoof infections.

2. Naturally occurring mineral salts and herbs provide protection and soothe tender areas. These provide a healthy re-growth environment - NT-DRY powder will not burn or harm the tender areas of the hoof.

2. Meanwhile a complex blend of highly absorbent natural clays absorb and dry the excess moisture in the hoof - This firms up tender frogs and heels! This combination dries the warm and moist bacteria breeding grounds normally found in the heel cracks and deep frog crevices. NT-DRY also minimizes the offensive odor associated with wet, mushy frogs and heels.

4. Continue to use NT-DRY® regularly to provide a healthy environment for frog and sulcus regrowth. Don't leave a heel crack unattended!

Also
Use
On
Mud Fever

- * Natural, Fast, Easy, Clean
- * Apply in seconds

"I first witnessed the power of NT-DRY ® while treating an A.O. Jumper who was suffering from months of severe thrush. In a matter of days after using NT-DRY, the problem was gone. We have continued on a NT-DRY weekly maintenance program, with no relapses, and the horse is now being re-conditioned to competitive show levels. Impressive product. Well Done." **Geoff Vernon, DVM, International Team Veterinarian**

Test

"... I was doing my regular rounds at the Los Angeles Equestrian Center when a Head Groom shouted at me from across the barn, "After all these years, this is the best sh*# you've ever given me!" He was waving a bottle of NT-DRY®." **Brant Phalen, Los Angeles Farrier.**

- * Bacteria hides in Heel Cracks!
Use NT-DRY to help close those cracks for good.

The sulcus/heel crack is warm and moist. As long as it remains open, your horse is exposed. Use NT-DRY ® regularly to provide a excellent healing environment.

Day 0 -- NT-DRY ® Application -- Day 4
